LACRE

Open source end-to-end mailbox encryption for your postfix server.

GPG Lacre is a content filter for Postfix a unencrypted incoming email using PGP or S/MIME for select recipients. This project is the continuation of the work of "gpg-mailgate" on providing open source, GnuPG based email encryption for emails at rest. All incoming emails are automatically encrypted with user's public key before they are saved on the server.

It is a server side encryption solution while the control of the encryption keys are fully at the hands of the end-user and

PGP key management

Use the form below to submit an ASCII-armored PGP public key. After submission, you will receive an email asking you to confirm your email address. Once confirmation is completed, mail sent to your email address via our mail server will be encrypted with your PGP public key.

Your email address (must match key)

ASCII-armored PGP public key
