To Whom It May Concern,

This letter serves as my cover letter in applying for the position of “Applied Mathematician”, as found on cryptocurrencyjobs.co.

After receiving my Master’s Degree in Mathematics, I have worked mostly in the educational field as a University Professor and College Instructor. Teaching is not much of an intellectual challenge once you get the lesson plans worked out. I have been working toward a career shift for the last few years, and am mostly interested in anything related to cybersecurity, data science, and/or blockchain technologies. As a way to demonstrate my technical abilities to a potential employer, I signed up for the Data Science Professional Certification program through HarvardX on my own accord. I was about 2/3 of the way through the program when personal circumstances inspired me to resign from teaching and focus on my coursework full time. I completed the certification in November of 2021. Now I am seeking employment where I can contribute my skills to the success of a game-changing project. When I came across the listing for “Applied Mathematician” with Panther Protocol I applied immediately because I am an excellent fit for the position, which is exactly what I have been seeking. I have been interested in privacy blockchain solutions for many years, so I can stand behind the project 100%.

I look forward to arranging an interview. Thank you for taking the time to look over my credentials and consider my candidacy.

Cordially yours,

Kaylee Robert Tejeda
